

Community Based Integrated Management of Childhood Illness (CB-IMCI) Program

1 BACKGROUND

Community Based Integrated Management of Childhood Illness (CB-IMCI) is an integrated package of child-survival programmes and addresses major killer diseases like pneumonia, diarrhoea, malaria, measles, malnutrition in under 5 year children. IMCI program was launched in 1997 as a pilot program in Mahottari district. The pilot study provided recommendations to mobilize the community health workers and Female Community Health Volunteer (FCHV) to improve the access of the management of childhood sickness at the household levels, thus making the program Community Based Integrated Management of Childhood Illness (CB-IMCI). Hitherto 2065/66, the program has been expanded to all 75 districts except the community level in 11 districts (Taplejung, Tehrathum, Khotang, Okhaldhunga, Sindhupalchowk, Kathmandu, Bhaktapur, Mustang, Manang, Rolpa, and Darchula). The success of the rapid scaling up of the program lies in its implementation modality which is an example of close collaboration and public private partnership between stakeholders

CB-IMCI program was implemented in the districts in the following order:
